

## Independent Assurance Statement to Stock Spirits Group plc.

ERM Certification and Verification Services (ERM CVS) was engaged by Stock Spirits Group plc to provide limited assurance in relation to the information set out below.

### Engagement Summary

<b>Scope:</b>	Whether the 2015 data for the following indicators are fairly presented, in all material respects, in accordance with the reporting criteria: <ul style="list-style-type: none"><li>Total GHG emissions (Scope 1 and Scope 2) in tonnes CO<sub>2</sub>e</li><li>GHG intensity (for Scope 1 and Scope 2 combined) in kg CO<sub>2</sub>e per litre of finished goods produced</li></ul>
<b>Reporting Criteria:</b>	WBCSD/WRI Greenhouse Gas protocol and UK Defra emission factors.
<b>Assurance Standard:</b>	ERM CVS' assurance methodology based on the International Standard on Assurance Engagements (ISAE 3000) Assurance Engagements other than Audits or Reviews of Historical Financial Information.
<b>Assurance level:</b>	Limited assurance.
<b>Respective responsibilities:</b>	Stock Spirits is responsible for preparing the 2015 GHG emission data and its presentation in its external reporting, including the 2015 Annual Report. ERM CVS's responsibility is to provide a conclusion on the agreed scope based on the assurance activities as described below and exercising our professional judgement.

### Our assurance activities

A team of assurance, GHG and sustainability professionals undertook the following activities:

- A visit to the Lublin Production & Bottling Facility (Poland) where we interviewed staff responsible for the data and reviewed samples of underlying source data for accuracy and completeness.
- Follow up to our 2014 visit to Baltic Facility to understand any changes in the business, operations, production levels or data responsibilities that may affect the 2015 data, as well as progress regarding ERM CVS' recommendations last year.
- A meeting with corporate staff responsible for collecting and calculating the data, during which we reviewed:
  - Stock Spirits' updates on internal reporting process and responsibilities;
  - the results from the trend analysis based on data provided for Q1 to Q3 2015 data;
  - the appropriateness and exclusion of sources based on predefined 'cut off point' for the consolidation in relation to Stock Spirits' operations;
  - the choice and application of emission factors and the reasonableness of estimates and assumptions; and
  - the underlying data for 2015 for each of the sites included in the consolidated data.
- A review of source data (on a sample basis) collected remotely from other major operations
- A subsequent desk-based review of the full year data for 2015, as well as assessing selected additional evidence, in January 2016.

### The limitations of our engagement

The reliability of the assured data is subject to inherent uncertainties, given the available methods for determining, calculating or estimating the underlying information. It is important to understand our assurance conclusion in this context. The procedures performed in obtaining limited assurance are less extensive than those used for an audit (reasonable assurance). We believe the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

### Our conclusion

Based on our activities, nothing has come to our attention to indicate that the data for the selected indicators, as defined above and listed below, are not fairly presented, in all material respects, with the reporting criteria.

- 2015 Total Scope 1 and Scope 2 GHG emissions: 44,494 tonnes CO<sub>2</sub>e
- 2015 GHG intensity: 439 grams CO<sub>2</sub>e per litre of finished goods produced

Jennifer Iansen-Rogers, Head of Report Assurance
